

CLIMATE CONTROL PRODUCTS WARRANTY

SPI warrants its climate control products, new or remanufactured, to be free from defects in material and workmanship for a period determined in this warranty from the date of installation or date of purchase. The sole liability of SPI, under this warranty, is to replace or repair such climate control products following its return to SPI or SPI's authorized dealers, together with the original invoice for the climate control product. This warranty covers any climate control products furnished from SPI, but does not include labor of any kind or materials not furnished by SPI or any charge for any such labor or materials.

This warranty does not apply to any equipment which has been repaired or altered in any way so as, in the judgment of SPI to affect the stability of the product. This warranty does not apply to products which have been subjected to misuse, negligence, and / or operating conditions in excess of those for which such equipment was designed and / or deemed defective by SPI as a result of the physical or chemical effects of water, steam or other liquids, gases or agents present in the system operating environment of the equipment or the failure of the vehicle warning system.

Warranty Coverage

- Compressors for passenger cars and light trucks/ vans are covered for a period of 1 year or 12,000 miles, whichever comes first, from the date of installation.
- Condensers are covered for a period of 2 years or 24,000 miles, whichever comes first, from the date of installation.
- Heater cores are covered for a period of 1 year or 12,000 miles, whichever comes first, from the date of installation.
- Evaporators are covered for a period of 1 year or 12,000 miles, whichever comes first, from the date of installation.
- Equipment and Service items are covered for a period of 120 days.
- Fluorescent and electronic leak detectors, electronic thermometers are covered for a period of 1 year from the date of purchase.
- All other Climate Control products are covered for a period of 120 days.

The warranty for compressors will be denied if the following conditions are not followed (Refer to compressor literature in box);

1. R12 and R134A are the only approved refrigerants for all SPI compressors (use of any other refrigerant will void warranty).
2. The accumulator/ filter drier must be replaced at the same time as the compressor.
3. The compressor clutch air gap must be verified prior to installation on vehicle (refer to OEM specifications / manufacturer specifications).
4. The proper type and amount of oil (see oil info) should be inserted through the suction port of the compressor or oil plug. With the use of a spanner wrench turn the compressor shaft (not the clutch pulley) 10 to 15 times, this will help properly distribute the oil throughout the compressor and prevent hydraulic lockup.
5. The A/C system must be held under vacuum for minimum of 45 minutes.
6. The fan clutch or radiator fan motor must be checked for proper operation.
7. For applications using an orifice tube or liquid line containing an orifice tube, the orifice tube must be replaced (installation of an orifice tube repair kit can be used).
8. If the system has an expansion device (expansion valve) the technician must inspect and clean the filter screen or replace the valve if necessary.
9. A/C system must be flushed with approved solvent. The only accepted option to flushing is the installation of an in-line filter / or compressor suction screen (as long as the refrigerant oil is not contaminated).
10. Condenser and radiator airflow must be checked for any obstruction or restrictions. Clean and realign bent fins. The technician may need to replace the condenser in specific applications (refer to compressor literature in box).

Replacement or repair of the climate control product by SPI shall be the only remedy available to purchase under this warranty. SPI shall not be liable for consequential or incidental damages of any kind resulting from the use of these or other products.
